

# Horizons Manufacturing Suite

HORIZONS  
INTERNATIONAL

## What can you do with HMS?

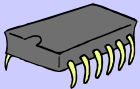

- ⚙️ Process manufacturing - building an item to spec where the volume or final quantity of a component is not predetermined - like yards of cement.

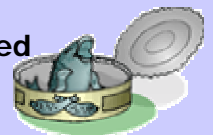

- ⚙️ Batch processing - where the final yield of the finished good is determined by the volume or weight of the components - as in loaves of bread.

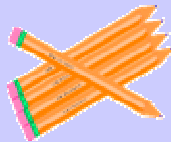

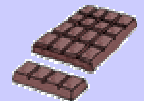

- ⚙️ Mixed Mode manufacturing - where a process item like "lotion" is matched up with the discrete item "bottle".

- ⚙️ Reverse manufacturing - where you get multiple different finished goods from one component input - as in different silicone wafers from one large slab of raw product.

- ⚙️ Kit to Order with addition of hZConfigurator to HMS - assemble goods in kits for sale as in diving mask, fins and snorkel as a snorkel gear set

- ⚙️ Lot sized manufacturing - where you are creating a whole group of like finished goods at the same time - as in 100,000 pencils.

- ⚙️ Any cost addition to an item in inventory - like moving items in a warehouse and adding the value of the labor to the cost of the item.

- ⚙️ Discrete manufacturing - building an item from specific set of discrete components - like a bike.

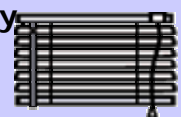

- ⚙️ Assemble to Order - creation of a Finished Good by putting together sub-assemblies.

- ⚙️ Make to Order with the hZConfigurator component - take an order from a client and build it from raw materials.

- ⚙️ Build to Stock - just to have on your shelf so you can use it or sell it another day.
